NOVELTY - Pharmaceutical composition for breast cancer, endometriosis, myometrium tumor, Alzheimer's disease, circulatory system disorders, menopausal disorders, irregular periods, cancer metastasis, premenstrual syndrome, muscular distress or osteopathies due to calcium/phosphorus imbalance comprises a gonadotrophin releasing hormone agonist and a selective estrogen receptor modulator.

DETAILED DESCRIPTION - Pharmaceutical composition for breast cancer, endometriosis, myometrium tumor, Alzheimer's disease, circulatory system disorders, menopausal disorders, irregular periods, cancer metastasis, premenstrual syndrome, muscular distress or osteopathies due to calcium/phosphorus imbalance comprises a gonadotrophin releasing hormone agonist (GnRH) and a selective estrogen receptor modulator (SERM). INDEPENDENT CLAIMS are also included for:

- (1) the use of a GnRH and a SERM in add-back therapy;
- (2) pharmaceutical composition for prostatic disease or prostate cancer comprising GnRH and a selective androgen receptor modulator (SARM);
- (3) agent for treating and preventing prostatic disease or prostate cancer or breast cancer or their recurrence or metastasis comprising GnRH and a sex hormone synthesis inhibitor, lyase inhibitor, receptor-type tyrosine kinase inhibitor, cytokine/chemokine inhibitor or endothelin receptor antagonist;
- (4) agent for treating and preventing prostatic disease, breast cancer or prostate cancer or their recurrence or metastasis, menopausal disorders or osteopathies due to calcium/phosphorus imbalance comprising a GnRH and a bone metabolism regulator; and
- (5) agent for treating and preventing breast cancer or prostate cancer or their recurrence or metastasis, myometrium tumor, endometriosis or prostatic disease comprising a GnRH and an immunotherapy drug.

ACTIVITY - Cytostatic; Nootropic; Neuroprotective; Cardiovascular-Gen.; Endocrine-Gen.; Muscular-Gen.; Osteopathic.

No biological activity data is given.

MECHANISM OF ACTION - Gonadolibrin-Agonist; Estrogen-Agonist; Estrogen-Antagonist; Androgen-Agonist; Androgen-Antagonist; Tyrosine-Kinase-Inhibitor; Cytokine-Antagonist; Chemokine-Antagonist; Endothelin-Antagonist.

USE - As gonadotrophin releasing hormone agonists used in combination with selective estrogen receptor modulators, selective androgen receptor modulators, sex hormone synthesis inhibitors, lyase inhibitors, receptor-type tyrosine kinase inhibitors, bone metabolism regulators, immunotherapy drugs, cytokine/chemokine inhibitors or endothelin receptor antagonists for treating and preventing endometriosis, myometrium tumor, Alzheimer's disease, circulatory system disorders, menopausal disorders, irregular periods, cancer metastasis, premenstrual syndrome, muscular distress, osteopathies due to calcium.phosphorus imbalance, prostatomegally or prostate cancer or breast cancer or their reoccurrence or metastasis.

ADVANTAGE - Combination enhances quality of life by enhancing gonadotrophin releasing hormone agonist activity and/or reducing side effects.
